

Customer Support Case Management Project Specification & Implementation

1. Project Overview & Business Case

Project Details

- **Project Name:** Customer Support Case Management[cite: 1, 2]
- **Target Platform:** Salesforce Service Cloud[cite: 1, 2]
- **Role Focus:** Salesforce Business Analyst (BA)[cite: 1, 2]
- **Methodology:** BA-Driven Implementation & Functional Requirement Decomposition

Business Problem Statement (AS-IS State)

The company manages customer support interactions manually via spreadsheets, uncoordinated emails, and direct phone calls[cite: 1, 2]. Without a centralized ticketing repository, cases are routinely delayed, customer inquiries lack consistent tracking, and leadership has no visibility into operational bottlenecks or agent workloads[cite: 1, 2].

AS-IS Business Pain Points

- **Unstructured Ingestion Channels:** Support requests arrive through fragmented emails and unstructured telephone calls[cite: 1, 2].
- **Decentralized Case Tracking:** Support agents log, track, and update complaint tickets manually inside standalone Excel sheets[cite: 1, 2].
- **Absence of Governance & SLAs:** There is no mechanism to monitor response or resolution Service Level Agreements (SLAs), nor an automated escalation path for overdue tickets[cite: 1, 2].
- **Repeated Inquiries:** Dissatisfied customers repeatedly reach out across multiple channels to request simple status updates[cite: 1, 2].
- **Zero Operational Visibility:** Management cannot measure case queues, backlog, agent capacity, or historical resolution metrics[cite: 1, 2].

Business Impact (AS-IS)

- Delayed resolution cycles leading to customer churn and lowered satisfaction scores[cite: 1, 2].
- Increased agent overhead due to administrative tracking rather than active problem-solving[cite: 1, 2].
- Decision-making based on assumptions and qualitative estimates rather than real-time audit data[cite: 1, 2].
- Substantial business risk regarding contractual SLA violations and non-compliance[cite: 1, 2].

Business Objectives (TO-BE State)

- **Single Source of Truth:** Unify all incoming customer complaints and service interactions within Salesforce Service Cloud[cite: 1, 2].
- **Automated Ingestion:** Convert emails and web inquiries directly into Case records via Email-to-Case and Web-to-Case[cite: 1, 2].

- **Rules-Based Routing:** Route cases instantaneously to the appropriate queue or specialized technician[cite: 1, 2].
- **SLA Governance:** Track First Response and Resolution milestones through Salesforce Entitlement Management[cite: 1, 2].
- **Real-Time KPI Dashboards:** Provide leadership with live reporting on case volume, backlog, resolution velocity, and agent performance[cite: 1, 2].

2. Project Scope Definition

Scope Category	Deliverables / Capabilities
In Scope[cite: 1, 2]	• Automated Case Intake (Email-to-Case, Web-to-Case)[cite: 1, 2] • Standardized Data Model & Custom Case Fields • Validation Rules enforcing data integrity • Automated Case Assignment Rules & Queue Setup[cite: 1, 2] • Role Hierarchy & Security Configuration • SLA Tracking via Entitlements & Escalation Rules[cite: 1, 2]

	• Management Reports and Operational Dashboards[cite: 1, 2]
Out of Scope [cite: 1, 2]	• Computer Telephony Integration (CTI)[cite: 1, 2] • AI-powered Agentforce / Einstein Chatbots[cite: 1, 2] • External ERP / Billing core data synchronization[cite: 1, 2] • Automated Knowledge Base generation (Phase 2 Roadmap)[cite: 1, 2]

3. Operational Transformation Matrix: AS-IS vs. TO-BE

Operational Area	AS-IS (Current State)	TO-BE (Salesforce Service Cloud)
Case Ingestion & Logging	Disjointed spreadsheets & local email inboxes[cite: 1, 2]	Centralized, multi-channel automated record creation[cite: 1, 2]
Ticket Assignment	Manual triage and uncoordinated forwarding[cite: 1, 2]	Automated assignment rules based on priority and type[cite: 1, 2]

SLA Tracking	Non-existent; no milestone visibility[cite: 1, 2]	Entitlements and milestones with automated escalations[cite: 1, 2]
Customer Notifications	Manual drafting; frequent duplicate follow-ups[cite: 1, 2]	Triggered auto-responses upon case creation and update[cite: 1, 2]
Data Quality Enforcement	None; free-text notes with missing details[cite: 1, 2]	Formula-driven validation rules on case lifecycle transitions
Business Reporting	Static manual reports compiled weekly/monthly[cite: 1, 2]	Real-time, dynamic Lightning dashboards[cite: 1, 2]

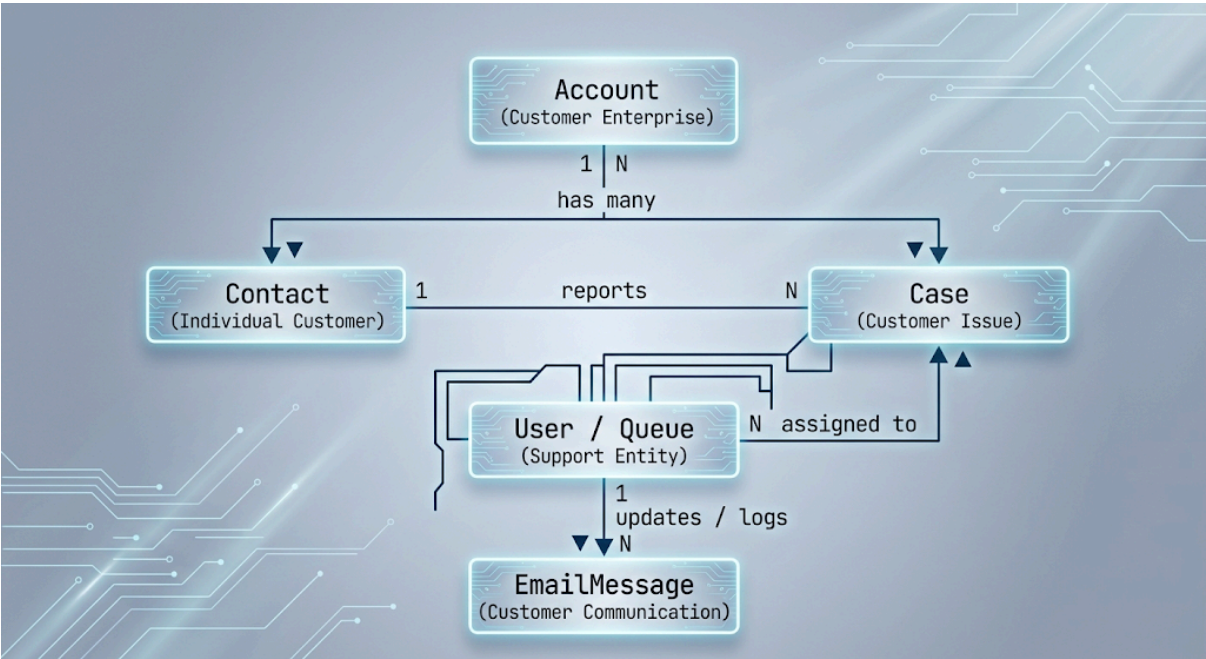

4. End-to-End TO-BE Case Lifecycle Architecture

5. Logical Data Model (ERD Representation)

Core Objects & Entity Relationships

- **Account:** Customer organization record.
- **Contact:** Individual stakeholder linked to an Account (**Account 1:M Contact**).
- **Case:** Central support entity capturing customer inquiries (**Account 1:M Case**, **Contact 1:M Case**).
- **EmailMessage:** System record logging incoming/outgoing communication threads (**Case 1:M EmailMessage**).
- **Queue / User:** Record ownership entity for case assignment (**User/Queue 1:M Case**).
- **Entitlement & Milestones:** Compliance rules tracking SLA progress (**Case 1:M Case Milestone**).

6. Functional Requirements & Data Dictionary

Case Object Field Specifications

Field Label	API Name	Data Type	Requirement	Picklist Values / Operational Scope
Case Origin[cite: 1, 2]	Origin	Picklist	Standard	Web, Email, Phone

Case Type [cite: 1, 2]	Type	Picklist	Standard	Mechanical,Electrical,Electronic,Structural,Other
Priority [cite: 1, 2]	Priority	Picklist	Standard	High, Medium, Low)
Status	Status	Picklist	Standard	New, Working, Escalated, Closed
Subject	Subject	Text (255)	Mandatory	Brief title describing the issue.

Validation Rule Specifications

- **Rule Name:** [Require_Resolution_Summary_On_Close](#)
- **Evaluation Condition:** Evaluates to **TRUE** when a user marks a case as **Closed** without completing the required resolution note.
- **Formula Syntax:**
- Plaintext

```
AND(
    ISPICKVAL(Status, "Closed"),
    ISBLANK(Description__c)
)
```

- **Error Message:** "Case close karne se pehle Resolution Summary bharna anivarya hai. / Resolution Summary is mandatory prior to case closure."
- **Error Display Location:** Field ([Resolution_Summary__c](#))

7. Configuration & Implementation Blueprint

Milestone 1: Org Setup & Queue Provisioning

1. **Salesforce Instance:** Navigate to [\[developer.salesforce.com/signup\]](https://developer.salesforce.com/signup)(<https://developer.salesforce.com/signup>) to provision a free Developer Edition Org.

2. **Access Setup:** Access administrative controls via the **Gear Icon (⚙️)** **\$\to\$ Setup**.
3. **Queue Creation:**
 - **Queue 1:** Label: **Tier-1 General Support** | Object: **Case** | Member: Project User.
 - **Queue 2:** Label: **Tier-2 Technical Support** | Object: **Case** | Member: Project User.
 - **Queue 3:** Label: **Finance & Billing** | Object: **Case** | Member: Project User.

Milestone 2: Field Customization & Validation Logic

1. **Picklist Values:**
 - Path: **Setup \$\to\$ Object Manager \$\to\$ Case \$\to\$ Fields & Relationships \$\to\$ Type**.
 - Add picklist items: **Product Defect, Billing Query, General Inquiry, Installation/Setup**.
2. **Custom Field Definition:**
 - Create **Resolution Summary** as a **Long Text Area (5000 characters)**.
3. **Validation Rule Execution:**
 - Path: **Case \$\to\$ Validation Rules \$\to\$ New**.
 - Input the syntax for **Require_Resolution_Summary_On_Close**, check syntax, set active, and save.

Milestone 3: Omni-Channel Intake Setup

Channel A: Web-to-Case

1. **Activation:**
 - Path: **Setup - Web-to-Case- Edit - Check "Enable Web-to-Case"**.
 - Set Default Case Origin to **Web**.
2. **HTML Generation:**
 - Open **Web-to-Case HTML Generator**.
 - Select required form fields: **Contact Name, Email, Phone, Subject, Description, Type, Priority**.
 - Specify Return URL (e.g., corporate landing page).
 - Uncheck reCAPTCHA for sandbox staging, generate the script, and save locally as **web_to_case.html**.

Channel B: Email-to-Case (On-Demand Service)

1. **Activation:**
 - Path: **Setup - Email-to-Case - Edit - Check "Enable Email-to-Case" & "Enable On-Demand Service"**.
2. **Routing Address Definition:**
 - Create Routing Address: **Support Email Routing**.
 - Associate corporate support email address.
 - Default Origin: **Email** | Priority: **Medium** | Owner: **Tier-1 General Support Queue**.
3. **Email Verification & Forwarding:**
 - Verify via confirmation link received in the email inbox.
 - Copy the generated 160-character Salesforce Email Services Address.

- Setup automated forwarding inside the corporate email platform (e.g., Gmail Settings \$to\$ Forwarding and POP/IMAP).

Milestone 4: Case Assignment Logic

- **Rule Name:** Customer_Support_Assignment_Rule
- **State:** Active (only one rule may be active at any given time)

Sort Order	Criteria Logic	Designated Assignee / Queue
1	Case: Case Type EQUALS Electrical, Electric AND Case: Priority EQUALS High	Queue: Tier-2 Technical Support
2	Case: Case Type EQUALS Other	Queue: Other
3	Case: Case Type EQUALS Machenical	Queue: Tier-1 General Support
